The story of less fuel, more power.

Ford EcoBoost. Sub 1-litre International Engine of the Year 2017.

The diamond-like coating on the piston rings reduces friction; the turbocharger, direct injection and variable valve timing boost efficiency. The result is remarkable performance from such an economical petrol engine. **Winner at the International Engine of the Year Awards** for six years running, the 1.0-litre Ford EcoBoost is available with 125 PS.

Engineered for economy.

With the help of **Ford ECOnetic Technology**, EcoSport's latest engines are remarkably fuel-efficient. The 1.0 Ford EcoBoost 125 PS petrol engine achieves an impressive 5.3 L/100 km*, with only 119g/km of CO₂ emissions*. The 1.5 100 PS EcoBlue diesel engine is even more frugal, achieving a combined fuel consumption of 4.2 L/100 km* and CO₂ emissions of just 110 g/km*.

Powered by **FORD EcoBoost**

*NEDC CO2MPAS correlated official test figures. Actual fuel consumption may differ. See Fuel & Performance section for more information.

Six-speed automatic transmission delivers a smooth, relaxing driving experience, especially in busy stop-start traffic. Change gear manually if you prefer, using the steering wheel-mounted paddle shifters (available with automatic transmission only).

An electrically-operated sunroof gives more beautiful views of surrounding scenery from the comfort of your EcoSport. A solar reflective coating helps keep the interior cool when closed, while an internal sunblind provides extra shade when you need it. (Option)

FORD ECOSPORT Engines

The test used to establish fuel consumption and CO₂ figures has changed to deliver results that are more representative of real driving. The Worldwide Harmonised Light Vehicle Test Procedure (WLTP) has replaced the old NEDC test. The Fuel Consumption and CO₂ figures shown are derived from the new WLTP test. Please note that vehicle registration tax (VRT) is not based on these WLTP figures in 2019, these figures are for information purposes only.

Understanding fuel data

The table below shows the fuel consumption (WLTP) and CO₂ emissions (WLTP) for each available engine when fitted on a standard specification EcoSport (with no options or accessories). Adding options or accessories to your chosen vehicle can impact WLTP fuel consumption and CO₂ emissions. Please speak to your Ford Dealer for more information.

The fuel consumption you achieve in real life conditions and CO₂ produced will depend upon a number of factors including options and accessories fitted, variations in weather, driving styles and vehicles load.

The declared Fuel/Energy Consumption CO₂ Emissions and Electric range are determined according to the technical requirements and specifications of the European Regulations (EC) 715/2007 and (EU) 2017/1151 as last amended. The applied standard test procedure enables comparison between different vehicle types and different manufacturers. In addition to the fuel efficiency of a car, driving behavior as well as other non-technical factors play a role in determining a car's fuel/energy consumption, CO₂ emissions and electric range. CO₂ is the main greenhouse gas responsible for global warming. A guide on fuel economy and CO₂ emissions which contains data for all new passenger car models is available at any point of sale free of charge.

FORD ECOSPORT Ecoblue

Engineered for economy.

EcoSport's latest Ford EcoBlue diesel engines are remarkably fuel-efficient. The 1.5 100 PS EcoBlue diesel engine achieves a combined fuel consumption of 5.0-5.1 L/100 km*, and CO₂ emissions of just 130-134 g/km*.

- Power 100 PS
- Combined consumption 5.0-5.1 L/100 km*
- CO₂ emissions 130-134 g/km*

*WLTP official test figures. Actual fuel consumption may differ. See Fuel & Performance section for more information.
